# APEX MICROTECHNOLOGY CORPORATION RELIABILITY PREDICTION <br> SA50 

```
            by
                Granger Scofield
Date of prediction: 15-Mar-01
```

This reliability prediction is based on MIL-HDBK-217F, December 2, 1991 including Notice 2, February 28, 1995.

```
Conditions of this prediction are as follows:
    Hybrid quality level is Commercial
    Environment is Gf Ground, Fixed
    Case temperature is 40 C
    Internal Power Dissipation = 5 W
    Supply voltage is
    28 V
    An AC signal is applied.
    Product introduction date: 01-Jun-94
```

    The results of this prediction are:
        9.33 failures per million hours; or,
        \(M T B F=107\) thousand hours.
    Monolithic MOS Digital Devices:
$\mathrm{Lp}=\mathrm{C} 1$ * PiT

Monolithic Bipolar and MOS Linear Devices:
$\mathrm{Lp}=\mathrm{C} 1$ * PiT
